

# ECLIPSE

## 1 Solar Shed Light

The solar lights consist of a solar panel with rechargeable batteries and LED lights wired directly into the solar panel. Light from the sun recharges the battery during the day and at night the energy stored in the batteries is used to power the LED light(s).

The length of time the lights stay on for is dependant on the amount of sunlight the solar panel has been exposed to during the day. No other power source or connections are required.

### PACK CONTENTS

- 1 x Light unit
- 1 x Mounting bracket
- 1 x Solar panel

### SAFETY & WARNINGS PRIOR TO USE

Please keep all plastic bags away from young children and pets, as these could cause suffocation.

Do not apply excess force or pressure to the solar panel.

The lights are splash proof protected (e.g. rain). Make sure the product is never placed where water can collect. A minimum of 2m from any water source (such as ponds) is recommended.

If your product becomes damaged, do not try to repair it yourself. Repairs must be carried out by qualified persons.

This product is not a toy. Do not allow children to play with it.

Do not make any changes or modifications to the lights, not recommended by the manufacturer.

Decide upon an appropriate location for your product.

Ensure the cables do not create a tripping hazard.

### ASSEMBLY INSTRUCTIONS

Your lights come fully assembled. All that is required to do before siting is to fit the solar panel mounting bracket to the rear of the solar panel and connect the power cable to the shed light.

### SITING INSTRUCTIONS

Solar lights are designed to be used outside in an open (unshaded) location.

To install the light fix 2 screws horizontally 164mm apart and hook the light onto the screws.

The solar panel should be located where sunlight can fall directly on the unit. Shadows from buildings, trees, walls, hedges or similar should be avoided as these will reduce the lighting up time. This can be up to 2.8 metres away from the shed light.

### CARE & USE

Periodically wipe clean with a soft dry cloth. Never use scourers, abrasives or chemical cleaners. Do not allow water to come into contact with electric components.

The solar panel lens should be cleaned periodically to ensure its efficiency is not reduced by dust and dirt.

Some condensation may form inside the lights or solar panel in cold conditions. This is normal and will not affect the performance of your light.

### PRODUCT SPECIFICATIONS

Product Size (cm)	18.8cm x 5cm x 6.9cm 2.8m cable
Light Source Type	5 LED's
Laser Category	Class 1
Surface Material	Plastic
Battery Type	2 x 1.2V (600 mAh) 'AA' NiMH rechargeable batteries
UK operating time (summer)	4 - 6 hours
UK operating time (winter)	2 - 4 hours

### BATTERY REPLACEMENT

- 1 Pull the power cord to OFF
- 2 Lift the cover
- 3 Remove old batteries
- 4 Insert new rechargeable batteries ensuring the +ve and -ve are the correct way
- 5 Replace cover
- 6 Allow batteries to reach full charge as described in 'prior to use' section
- 7 Pull the power cord to ON
